

YEALINK T46U TELEPHONE FEATURES

Abadata Connect Customer Training Guide

The Yealink T46U is a full-featured business telephone designed for everyday office calling. It combines dedicated call-control buttons, a color display, programmable keys, high-quality audio, and expansion options. Abadata Connect programs the phone to match your organization's call flow and button standards.

DISPLAY & PROGRAMMABLE BUTTONS

4.3-inch Color Display	Shows caller information, menus, call status, soft-key choices, directories, history, and programmed button labels.
10 Line / DSS Keys	Keys beside the display can be assigned to lines, Park, extensions/BLF, speed dials, paging, intercom, equipment controls, and other functions.
Up to 27 DSS Positions	The programmable keys can use three display pages, providing up to 27 paperless DSS positions.
4 Soft Keys	Buttons below the display change function based on what the telephone is doing—for example Call, Send, Resume, Conference, or other choices.
Navigation Keys	Use the arrow/OK controls to move through menus and information and access items such as History and Directory.

DEDICATED CALL-CONTROL BUTTONS

HOLD	Places the current call on exclusive Hold at your telephone; use the appropriate call key or Resume to return.
TRANSFER	Starts the process of transferring a call to another extension or telephone number.
MESSAGE	Provides access to voicemail when configured for your Abadata Connect service.
HEADSET	Places or answers calls through a connected compatible headset.
MUTE	Turns off your microphone so the other party cannot hear you; the key illuminates when active.
REDIAL	Provides quick access to previously dialed calls / redial functions.
SPEAKER	Turns the full-duplex hands-free speakerphone on or off.
VOLUME	Adjusts handset, headset, speaker, or ringing volume depending on what the phone is doing.

EVERYDAY ABADATA CONNECT FEATURES

Call Handling	Make and receive calls, Hold, Transfer, Conference, Call Park, pickup, forwarding, call waiting, DND, and voicemail as configured.
Call History	Review dialed, received, missed, and forwarded calls from the telephone display.
BLF / Extensions	Programmed BLF buttons can show monitored extension status and provide one-touch calling.
Paging / Intercom	Programmed buttons or dialed destinations can access telephone paging, intercom, and connected paging systems.
Caller ID	The display can show the incoming caller's name and number when that information is available.

CONNECTIVITY & EXPANSION

Network & Power	Dual-port Gigabit Ethernet and Power over Ethernet (PoE). A PC can commonly share the network connection through the phone.
Dual USB Ports	Support compatible USB accessories. Depending on configuration, USB can support headsets, optional Wi-Fi/Bluetooth adapters, recording, and other supported devices.
Headsets	Supports compatible USB and electronic-hook-switch (EHS) headset solutions for hands-free users.
EXP43 Expansion	For users needing many additional monitored extensions or feature keys, the T46U supports Yealink EXP43 color-screen expansion modules.

ABADATA CONNECT TIP — KEEP IT SIMPLE

The T46U can do far more than most users need every day. Abadata Connect normally programs the most useful functions into a consistent button layout for your organization. Additional BLF extensions, speed dials, paging, equipment controls, or other features can be added where the user's job requires them.
