How to Guide Setting up ConnectUC Mobile App

To install ConnectUC on your mobile device, simply navigate to your device's App Store (iOS devices use the Apple Store, and Android Devices use the Google Play Store), locate the ConnectUC app within the App Store, and select the option to install.

**In order to sign into the app use the username (extension@.....) (also same as what was setup in welcome email).

Once the application is installed and you have signed in, you will be prompted to allow device permissions and notifications. Please be sure to allow these permissions, as some ConnectUC Mobile features may not work properly otherwise.

Our recommendation is to allow the app to access ALL cell phone resources.

Once the app is installed on your cell phone click on the icon. The first time (and occasionally thereafter) you will be prompted with a username and password field.

The username and password are the same username that your received in the welcome email and the password you set. (This is the same password for your dashboard as well!)

Backup Service:

If you are using the cell phone app as a backup in the event that main Internet at your location goes down... Bear in mind that you should generally NOT attach to the wifi at your location with your cell phone. Instead use the cell phone data. That gives an alternate route to compensate for the loss of last mile Internet service.

Rebranding:

As we move down the road, expect to see the ConnectUC app be rebranded as Abadata Connect to reflect our acquisition of the service.

Questions?

As always, if you run into questions or have a struggle implementing the service feel free to either email: magic@abadata.com or call: 989-883-3411.
